As custom packaging specialists for over the past 30 years, Custom Equipment Company has pioneered the development and manufacturing of custom collapsible, reusable containers for use in both the semi-bulk liquid and dry products marketplace. We customize plastics fabrication for specialized application through a variety of methods such as:

- Vacuum Form
- Twin Sheet Vacuum Form
- Rotationally Molded
- Injection Molded.

Given the rising costs and demands of packaging and transportation, the rapid depletion of our natural resources and the corporate urgency to save money and decrease their carbon footprint our reusable and recyclable packaging system is the viable solution at a significant cost savings to all. We also offer a complete wash, repair and reuse facility for the service of all our products.
