Medium to Heavy Gauge Vacuum Forming

We are the experts in high quality vacuum formed and twin sheet reusable packaging in sizes up to 7' x 11' x 45" deep in gauges from .060" to .500".

Our accomplished, knowledgeable staff has experience in virtually every material handling situation. Our engineers can take your part, prints or CAD files and design a custom tray that will protect your parts. We have designed thousands of trays, containers, pallets as well as medium to heavy gauge parts from the ground up to meet our customers' exact specifications.

Engine Pallet

Extremely durable, our reusable dunnage trays extend packaging life for multiple return trips to reduce costs. In fact, our trays will likely last well beyond the time your product becomes obsolete. And if that happens, we offer a buy back program for credit on your next order. It's a way of helping the environment and your budget.

ADDED PROTECTION

We can custom design your tray to give you the best protection during shipping. For example, we can design trays durable enough to take the weight off your product, so there's no stress or weight transfer through your product during shipping.

CUSTOM COLOR COMBINATIONS

We can match your trays to your company colors and add color ID striping for easy product identification.
