Trays

Dunnage or WIP Trays

Dunnage / work-in-process trays are designed to effectively protect and transport your products. These trays offer you an ideal solution to safely move products and components from location to location in your facility or to your end customer safely and free of damage. Trays can also be designed to be used and loaded robotically.

Medical

Today's medical device manufacturers and packagers look to thermoformed trays to protect their products, withstand sterilization, and lengthen product shelf life. We produce a variety of custom trays for use in medical applications.
